TO **OLGA MEGORSKAYA** · FOUNDER & CEO, TOLOKA AI

Dear Olga,

I have spent the last few years selling a similar proposition from the other side: taking an unfamiliar B2B offer, making it understandable to a buyer who has never bought it before, and carrying it from a cold conversation to a signed, delivered contract. At Queue I personally closed most **\$15K-\$30K** engagements and worked in the core team on larger work from **\$100K/year to \$100K/month**; monday.com re-signed multiple times and expanded into its developer-platform launch through POC changes and internal reshuffles. At Flow, a two-to-three-person studio, I personally sell **\$16K-\$35K** engagements from offer through close, delivery and retention, adapting the case from a one-call founder to a committee or board and carrying it through legal and procurement. I have not sold operational data yet — but the motion is the same one, and I am not pretending otherwise.

The outbound base is already in place: list qualification, validation and deliverability systems built on company-intelligence and contact-verification data; list-building and LinkedIn outbound automation that reaches tens of thousands of prospects a month; warmed domains, sending infrastructure, campaign management and cold calling. I build the sales case, negotiate, and draft and finalize the agreement.

I can hold the technical side of the conversation too. I run GTM and AI-search for **Tasq AI, a robotics-data company** — shipping research-backed content on robot training-data pipelines and edge cases — so I work daily in the physical-AI and robotics-data space Toloka serves. My MSc in Big Data & Business Analytics adds working knowledge of how data moves through ML and computer-vision pipelines. Enough to explain the business use, the data flow and the constraints honestly to the operator whose business generated the data.

If I started, I would go after **warehouses and logistics** first, where physical workflows, operational data and partner economics are easiest to make concrete; then **factories**; then **restaurants**, where a smaller owner can decide quickly. I would bring compliance into the first conversation with **pharmacies**: at FormDR, a HIPAA-regulated healthcare SaaS, I rebuilt measurement and onboarding while keeping protected health information out of the event stream, and I would bring that caution into any health-adjacent discussion alongside Toloka's legal process.

I am available on a freelance B2B contract, fully remote, **40h/week**. I would start by working the beachheads above to owner and GM level, qualify and structure small paid pilots, then turn what works into a documented playbook — working toward Toloka's bar of **2-3 collection partners signed across 2+ regions** and a qualified pipeline in the first 90 days.
