COVER LETTER · FREELANCE DATA PARTNERSHIPS LEAD

LINKEDIN.COM/IN/JAKE-MCMAHON-PRODUCT-AI · BASED IN TBILISI · ASIA, EUROPE, MENA & US TIME ZONES · SELLS INTO APAC TOO

TO **OLGA MEGORSKAYA** · FOUNDER & CEO, TOLOKA AI

Dear Olga,

You are hiring the first person in a function that has to persuade companies that have never sold data to become collection partners. The job is to open a cold conversation with an owner, GM or operations lead; make the commercial value and safeguards understandable; structure a paid pilot; and turn a working pilot into an ongoing supply relationship. It is a selling role before it is anything else.

I have sold that kind of unfamiliar proposition at the same deal sizes. At Queue, I helped close B2B work from **\$100K/year to \$100K/month** for monday.com, Guardio, CirclesUp, 8fig, thirdweb and NewDayUSA. I built and sold products as well as the service around them, then carried the promise through delivery and customer success. monday.com re-signed multiple times and expanded into its monday dev GTM launch through POC changes and internal reshuffles. At Flow, I personally sell **\$16K-\$35K** engagements from offer through close, delivery and retention, changing the case for a one-call founder, a committee or a board, and carrying it through legal and procurement.

The outbound operating base is already there. I build target pools through qualification, verification and email-validation pipelines using monid, treg, AI Ark, BounceBan, maps data and residential proxies. I use ListKit or custom builds and LinkedIn automation to reach tens of thousands of prospects each month, then run warmed domains, sending infrastructure, campaign management and cold-calling through Zadarma. I build the sales case, negotiate, draft and finalize the agreement.

I can have the data conversation behind the pitch as well. Through Tasq's AEO/GEO/SEO work, I have worked across AI and data use cases, robotics and physical AI. My MSc in Big Data & Business Analytics gives me working knowledge of how data moves through ML and computer-vision/robotics pipelines. I can explain that pathway honestly and make it relevant to the operator whose business generated the data.

I would begin with **warehouses and logistics**, where physical workflows, operational data and partner economics are easiest to make concrete; then move to **factories**; then **restaurants**, where a smaller owner can decide quickly. I would approach **pharmacies** with compliance in the first conversation. At FormDR, a HIPAA-regulated healthcare SaaS, I rebuilt measurement and onboarding without placing PHI in the event stream. I understand the operating discipline health-adjacent data requires.

I am available on a freelance B2B contract, fully remote, **40h/week**. In the first 90 days, I would work to Toloka's bar: **2-3 collection partners signed across 2+ regions**, roughly 10 qualified data-provider leads, and a partner playbook that makes the motion repeatable.
