TO **OLGA MEGORSKAYA** · FOUNDER & CEO, TOLOKA AI

Dear Olga,

I have spent the last few years selling a similar proposition from the other side, taking an unfamiliar B2B offer, making it understandable to a buyer who has never bought it before, and carrying it from a cold conversation to a signed, delivered contract. At Queue I personally closed most **\$15K-\$30K** engagements and worked in the core team on larger work from **\$100K/year to \$100K/month**, and monday.com re-signed multiple times and expanded into its developer-platform launch through point-of-contact changes and internal reshuffles. At Flow, a two-to-three-person studio, I personally sold **\$16K-\$35K** engagements from offer through close, delivery and retention, adapting the case from a one-call founder to a committee or board and carrying it through legal and procurement. I have not sold operational data partnerships yet. What I have done is negotiate contracts, handle regulated data under HIPAA, and sell from owner to procurement.

The outbound base is already in place. List qualification, validation and deliverability systems are built on company-intelligence and contact-verification data. List-building and LinkedIn outbound automation reaches tens of thousands of prospects a month. Warmed domains, sending infrastructure, campaign management and cold calling round it out. I build the sales case, negotiate, and draft and finalize the agreement.

I can hold the technical side of the conversation too. I run GTM and AI-search content for **Tasq AI, a robotics-data company**, shipping research-backed pieces on robot training-data pipelines and edge cases, so I work inside the physical-AI and robotics-data space Toloka serves. My MSc in Big Data & Business Analytics adds working knowledge of how data moves through machine-learning and computer-vision pipelines, enough to explain the business use, the data flow and the constraints to the operator whose business generated the data.

If I started, I would go after **warehouses and logistics** first, since physical workflows generate operational data with the clearest partner economics and the fastest buyer to convince, then **factories**, then **restaurants**, where a smaller owner can sign quickly. I would bring compliance into the first conversation with **pharmacies**, since at FormDR, a HIPAA-regulated healthcare SaaS, I rebuilt measurement and onboarding while keeping protected health information out of the event stream, and I would bring that discipline into any health-adjacent discussion.

I am available on a freelance B2B contract, fully remote, **40h/week**. In the first 90 days I would work the beachheads above to owner and GM level, qualify and structure small paid pilots, and turn what works into a repeatable approach, with a target of **2-3 collection partners signed across 2+ regions** on the way.
