COVER LETTER · FREELANCE DATA PARTNERSHIPS LEAD

LINKEDIN.COM/IN/JAKE-MCMAHON-PRODUCT-AI

TO **OLGA MEGORSKAYA** · FOUNDER & CEO, TOLOKA AI

Dear Olga,

You are hiring the first person in a function that must find companies that have never sold data before, win their trust, structure a pilot, and turn it into a repeatable supply relationship. I have done that commercial motion from the selling side at comparable deal sizes. At Queue, I sold and closed **monday.com, Guardio, CirclesUp, 8fig, thirdweb and NewDayUSA** from **\$100K/year to \$100K/month**, carried work through delivery and customer success, and **re-signed monday.com multiple times** through the monday dev GTM launch, POC changes and internal reshuffles.

That was selling, not buying, but the concept is the same: find the benefit, address the concern, structure the pilot, scale it. I have sold to the full range of decision structures, from a single founder deciding in one call to multi-layered committees and flat boards, and can carry a deal through legal and procurement.

First, the outbound machinery. I build lead pipelines for qualification, verification and email validation with monid, treg, AI Ark, BounceBan, maps data and residential proxies. I run ListKit or custom builds with LinkedIn automation to reach tens of thousands of prospects a month, then run the delivery stack: cold-email infrastructure, domain warm-up, campaign management and cold-calling via **Zadarma**. That is the operating base for a founding partner pipeline.

Second, the domain. For the past quarter I have owned a slice of Tasq AI GTM (AEO/GEO/SEO), working across AI and data regulation, operational-data use cases, and robotics and physical AI. My MSc in Big Data & Business Analytics gives me working knowledge of the ML and computer-vision side, including how data is processed for CV and robotics pipelines. I can make the operational case to an owner, then explain the data pathway clearly.

My beachhead order would be **warehouses and logistics**, then **factories** with sensor and robotics-relevant data, then **restaurants** where an SMB owner can decide quickly. I would approach **pharmacies** after that, with health-adjacent compliance handled directly. At **FormDR**, a HIPAA-regulated healthcare SaaS, I worked across measurement, churn and onboarding while keeping PHI out of every event.

I work on a freelance B2B contract, fully remote and **40h/week**. In the first 90 days, I would work to Toloka's bar: **2-3 collection partners across 2+ regions**, a qualified pipeline, and a partner playbook that makes the motion repeatable.
